

Preamble

Your future will depend heavily on how well you do in college. Earning good grades is essential to having a good start in your career. This is true whether you go into industry, graduate school, or professional school. Potential employers and admissions officers are less likely to interview applicants who have poor grades and low grade point averages. Thus, it is imperative that you should do the best possible in every course you take in college. This Handbook is intended to give you an overview of careers in chemistry, the chemistry program at Northern Kentucky University, and the opportunities available at NKU that can help you have a successful college career. The University and the Chemistry faculty are committed to your success.
