

Silly Putty

Instructions

Materials:

Elmer's white glue

Liquid starch

Cup

Demo Procedure:

1. Pour 10 mL of Elmer's glue into a small cup.
2. Mix in 5 mL of liquid starch.
3. Stir the mixture.
4. Pour the mixture into your hand and mold into a ball, if the mixture is stringy then you may need to add more glue. This can be a little messy because you really have to knead the mixture well to form the ball.
5. The silly putty ball should hold together and bounce when you throw it against the table top. This is an example of an elastomer.
