Graphing with Excel

Open excel and type in data. Remember that row A will be the X value and B is the Y value for the graph.
Next, click on the chart wizard button
Select Scatter
Select Next
Select **Next**, then fill in Title, and X and Y axis information

Select **Next**, this will insert it into the sheet
Example of Graph
Next click on any of the data points and then select **Chart**, then **Add Trendline**
Select **Linear** for the type

Than select **Options**, and check the “**Display equation on chart**” and click **OK**
You will then get the information displayed. From here you can print or cut and paste it into a blank document for printing. If you want you can also click on the regression equation and move it on the plot to make it easier to read.
